A. This modification is issued to obligate American Recovery and Reinvestment Act (Recovery Act) of 2009 funds for The Idaho National Laboratory to purchase capital equipment for the High Energy Battery Test Facility; To conduct experiments for evaluating the effect of supercritical carbon dioxide, at elevated temperatures, on precipitation and dissolution of mineral phases that are typical of geomedia found in geothermal reservoirs; To develop a physics-based rock deformation and fracture propagation simulator by coupling a discrete element model for fracture generation with a continuum-based multiphase fluid flow and heat transport model; identify and resolve issues that are associated with using air-cooled condensers in the next-generation energy conversion systems, achieve the full benefits of using mixed working fluids in air cooled binary cycles, evaluate the benefits of using air-cooled condensers with flash steam cycles, and establish criteria for designing air-cooled binary plant turbines; and To develop a set of tracer test planning and analysis tools to define the parameters necessary for successful testing. Identify new tracers suitable to a wide range of potential reservoir volumes and permeabilities, and demonstrate the utility of newly developed tracers in a system representative of Enhanced Geothermal Systems
